I’m a senior product designer with deep frontend engineering experience. At FreshBooks and Loopio, I helped turn complex workflows into more coherent products, from early prototypes through implementation. I also build design systems and tools, mentor designers and engineers, and improve the everyday work of making software.

Experience: Informal Systems Inc., Senior Design Engineer 2022–2026

Designed and built websites and internal tools for 8+ teams across 10+ web properties. Created a CMS workflow that let content owners update their own sites, with reusable components that kept the experience consistent.

Loopio Inc., Principal Designer → Senior UX Engineer 2018–2022

Co-designed and prototyped the experience that replaced Loopio’s original product, then built and documented the React components used across four product teams. Mentored designers and helped engineers adopt the new system.

FreshBooks.com, UX Designer & Design Ops 2012–2018

Selected for the small team reimagining FreshBooks’ core product. Worked across UX research, interaction design, prototyping, and frontend implementation to create clearer workflows and reusable patterns, including a transition that let customers move between the old and new products at their own pace.

York University / Sheridan College, Course Instructor Sept 2017–Apr 2019

Taught interaction design in the joint York/Sheridan program and later Sheridan’s design program. Mentored 60+ students in responsive design, interface design, and frontend development.

Fusenet Inc., Interface Designer 2009–2011

Redesigned a digital media platform and built a working prototype that helped the team move from design into implementation and launch.

Education: York/Sheridan, Bachelor of Design (Honours) 2008–2012

Graduated magna cum laude from the Joint Program in Design, with a focus on interaction and systems design.

Strengths: Product Design • UX Research • Interaction Design • Prototyping
Design Systems • Frontend Engineering • Design Operations
Critique & Mentorship • Cross-Functional Collaboration
